

BPI How-to:

UNIVERSAL PRIMER POCKET CONDITIONER™

1. Place the round anvil **(1)** on a hard, flat surface (wood or padded surfaces tend to absorb and dampen the necessary energy) with the primer ring facing upward.
2. Place the deprimed hull on the anvil and center it over the primer ring.
3. Insert the tapered end of the rod **(2)** down through the center of the hull and into the empty primer pocket below.
4. Use a hammer or rubber mallet to give the end of the rod a firm rap **(3)**.
5. Remove the hull from the tool and utilize according to standard loading procedures.
